Subject: Location coordinates needed

Stephanie, Can you please forward this request for information:

The attached table has location/sample IDs for which we need coordinates. If these samples are from composite samples then perhaps you can provide a central location to which we can tie that sample. If all you have available is a figure with these samples on it we can use it to eye up a location in GIS to pull coordinates from. Also if needed there is a column for location description if you need to include any details about the sample location.

If you have any questions please contact me Scott Kirchner at 732 590-4677

Thanks for your help
